

California Apricots

The first harvest of the season will begin on April 28, 2010. We will begin with the Dream Cot (pictured below). This apricot has the slight tip, but has a nice aroma and nice hard flesh, making it an easy traveler to the east coast. The current temps are 75 degrees during the day and 60 at night. It is at night when the fruit begins to mature. The blush is about 50% at the moment with a slight shade of green. **DON'T LET THE SHAPE FOOL YOU THESE WILL EAT LIKE NO OTHER COT!**
